Proposed Solution Template

Date	03 AUGUST 2025
Team ID	LTVIP2025TMID56112
Project Name	Doctor Appointment App : Book doctor appointments instantly. Find top doctors, schedule visits or video calls, and manage your health—all in one app.
Maximum Marks	2 Marks

Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Patients often face difficulties in booking timely doctor appointments due to long wait times, limited access to specialists, lack of transparent availability, and inefficient scheduling systems. There is a need for a convenient, reliable, and accessible platform to streamline appointment booking and improve the overall healthcare experience.
2.	Idea / Solution description	The proposed solution is a user-friendly mobile app that allows patients to search for doctors, view real-time availability, and book appointments instantly—either in-person or via video consultation. The app will also offer features like appointment reminders, digital health records, secure messaging, and online payments to simplify and modernize the healthcare booking process.
3.	Novelty / Uniqueness	Unlike traditional booking systems, this app offers a real-time, integrated platform combining appointment scheduling, telemedicine, and digital health record management. Its smart doctor-matching algorithm, user-centric design, and seamless end-to-end healthcare experience set it apart from existing solutions.
4.	Social Impact / Customer Satisfaction	The app improves access to quality healthcare, especially in underserved or remote areas, by enabling

		virtual consultations and reducing wait times. It empowers patients with convenience, transparency, and control over their health. Enhanced communication and streamlined services lead to higher customer satisfaction and better health outcomes.
5.	Business Model (Revenue Model)	Earn through appointment commissions, doctor subscriptions, teleconsultation fees, in-app ads, and partnerships with pharmacies, labs, and insurers.
6.	Scalability of the Solution	The app is highly scalable, with potential to expand across regions, integrate more specialties, support multiple languages, and onboard hospitals, clinics, and health partners globally.
